Footnotes						
¹ Use of building materials or products that have been extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site. If only a fraction of a product or material is extracted/harvested/recovered and manufactured locally, then only that percentage (by weight) shall contribute to the regional value. ² Manufacturing refers to the final assembly of components into the building product that is furnished and installed by the tradesmen. ³ Combines recycled content, emissions and local production.						
⁴ The final step in manufacturing, the addition and blending of pigments and colorants, is usually performed by regionally-based dealers. The percentage weight of pigments and colorants varies depending on the color selected. Low and zero VOC pigments and colorants are available. Testing is in progress.
